## Environmental and Social Risk Management Project

Launched in 2017, the purpose of the Environmental and Social Risk Management Project is to review the environmental and social risk in our activities and business in Brazil and foreign units. Each work front relies on the identification, review and implementation of governance for the identified risks. This initiative is headed by the Environmental and Social Risk Management, together with the Sustainability, Compliance and Environmental and Social Legal teams.

## Squad Climate Finance

- Planning
- Communication
- Organization
- **Conquest**

Articulate and implement climate finance governance so that Itaú can boost the low carbon economy and incorporate climate risk issues into its operations

## EXTERNAL PARTNERS

### UNEP-FI

“Extending our horizons” and “Navigating a new climate”

### Febraban

“Implementing the TCFD recommendations: a roadmap for the Brazilian banking sector”

### CEBDS

“Financial impacts of climate risk”

# Climate Finance and the TCFD implementation path

Identify how climate change can impact the 25 sectors, which account for more than 65% of credit granted out of the total CIB portfolio.

We believe to have the potential to influence positive transformations in society and foster a low-carbon economy

We will continue to work on the progressive alignment of our climate finance-related disclosure with the recommendations of the TCFD.

Obrigada!
